

Lecture 3

The settlement system of Russia

- Typology of territories
- Community centers
- Supporting framework for settlement
- Agglomerations and large cities
- Support settlements
- Strategy for spatial development of Russia

Economic specialization

It's important to determine the territory's **economic specialization**. Typically, this will be either mining, manufacturing, or agriculture. If the territory has no manufacturing, its specialization will be in other sectors (education, healthcare, etc.). Furthermore, the territory may be a transport and logistics hub. To do this, it's necessary to examine the structure of shipped goods according to OKVED (All-Russian Classifier of Economic Activities) for at least the past year. The largest shipments in one category indicate **the territory's specialization**. Mixed specializations (a diversified economy) also exist.

Section A: Agriculture, forestry, hunting, fishing and fish farming **Section B:** Mining

Section C: Manufacturing **Section F:**

Construction **Section G:** Wholesale and retail trade; repair of motor vehicles

and motorcycles **Section H:** Transportation and storage **Section I:** Hotel and catering activities **Section J:** Information and communication activities

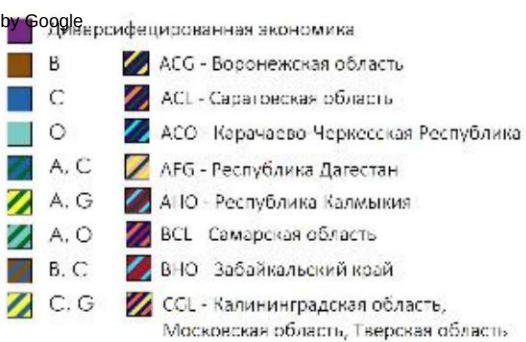

Other sections: D, E, K, L, M, N, O, P, Q, R, S, T, U

Economic specialization

The subjects of the Russian Federation were distributed according to areas of economic specialization. For this the structure of GRP (for 2019) was studied and industries that make up more than half of the maximum significance among the industries of the constituent entity of the Russian Federation. The branches of GRP are designated by Latin letters.

Climate groups (macroclimatic regions)

Russia's territories are located in vastly different **natural and climatic conditions**. Some have well-developed agriculture and tourism, while others are virtually unsuitable for human habitation. To determine potential and develop tools, it is necessary **to differentiate these territories**.

Population density

The territories of Russia differ significantly in *terms of transport accessibility*, determined by the settlement system. The indicator **The population density** is the one according to which the subjects of the Russian Federation were grouped (approximately by dividing by 2 at each step).

I (500+ people/km²)		IV (27+ people/km²)		V (13+ people/km²)		VII (1+ people/km²)	
Moscow	4941.45	Bryansk Oblast, Vladimir	33.93	Altai Krai Astrakhan	13.67	Amur Oblast, Arkhangelsk	2.16

 ■ 100-499 человек ■ 1-99 человек

Settlements with a population of up to 100 people

Federal initiative

In accordance with the Decree of the Government of the Russian Federation of October 6, 2021, No. 2816-r, **"On the list of initiatives for the socio-economic development of the Russian Federation until 2030,"** one of the declared goals is the achievement of Initiative II.12, *"Cities of Great Opportunity and the Revival of Small Settlement Forms."*

The **"Aggressive Infrastructure Development"** strategy defines development priorities for: • agglomerations • strongholds • geostrategic regions

<...>At the same time, it is proposed that **rural areas** and **small towns** *will not be neglected* . In each region , 15-20 "strongholds" could be selected where the quality of life and provision of medical, cultural, and educational services *will be higher*. <...>

Deputy Prime Minister of the Russian Federation **Marat Shkirzyanovich Khusnullin**

Support framework for settlement

The supporting framework of settlement is a network of the most significant settlements of a certain territory and the transport communications connecting them.

The nodal elements of the O. k. r. are **the supporting centers of settlement**, they perform the functions of central settlements in regional settlement systems of a certain hierarchical level and, in turn, are structural *elements of settlement systems of a higher rank*.

The key elements of the regional economic zones of countries and regions are, as a rule, large cities and urban agglomerations that combine the functions *of organizing and comprehensively servicing the surrounding territories* and the main specialized industry centers of the country (various branches of industry, science, resorts and health resorts, etc.).

The nodal elements of the O. k. r. of more fragmented territories can also be *relatively small settlements* (for example, in the O. k. r. at the level of villages, lower political and administrative regions of the USSR - the centers of the estates of collective and state farms, etc.).

Extra-administrative territorial entities

- is a certain territorial community, the boundaries of which are determined by mutual social, ecological and economic interests.

Pros

- Improving quality and conditions of life for the majority of the population territories
- Potential for self-development of territories •
- Increased mobility population

Cons

- Reduction of funding for some territories
- Desolation and extinction of some territories
- Complexity of management and subordination issues

The experience of the USSR

The USSR's agricultural policy from the 1960s to the mid-1980s, based on nationalization, centralization, and concentration of agricultural production, led to *the final alienation of peasants from the land*, turning them into hired laborers.

The processes of consolidation of collective farms, transformation of collective farms into state farms, and resettlement of **“unpromising”** villages that unfolded in the 1950s–1970s *accelerated the tragedy of de-peasantization*.

Moreover, if the rural migration to cities, which sharply intensified in connection with the distribution of passports that began in the late 1950s and was natural in the conditions of an industrial society, was an *“internal” factor* in this process, then changes in settlement patterns were identified as an *“external” factor* in de-peasantization.

The party's course towards ever greater **concentration of agricultural production**, which began in the 1950s, received a boost in the 1960s - In the early 1980s, further development was made in *the liquidation of “unpromising” villages and towns*.

The beginning of this campaign is associated with the approval in 1960 by the Research Institute of Agricultural Construction of the Ministry of Agriculture of the USSR of the *“Rules for the Development of Rural Settlements of the RSFSR,”* in which the term **“unpromising village” first appeared**.

The same ideas formed the basis of the well-known Resolution of the Central Committee of the CPSU and the Council of Ministers of the USSR *“On measures for the further development of agriculture in the Non-Black Earth Zone of the RSFSR”* (March 1974), which outlined the consolidation of villages and the liquidation of **114 thousand settlements out of 143 thousand**.

Public reaction to the USSR's policies

*"I absolutely refuse to agree _____
with this concept: an "unpromising" village. What is
"unpromising"? <...> "Unpromising" arose from the wrong
approach: how to manage things more conveniently,
easier, and not how to best tend the land and care for people.
People turned out to be a means of the economy, and not the
other way around." V.G. Rasputin*

*"What incomprehensible courage is needed to determine from
somewhere far away from a great multitude of villages of a
huge _____
some countries are "promising", while others are
"unpromising" ones, subject to liquidation, guided either by the current
gigantic boundaries of collective farms, or by the notorious benefit due
to savings

funds for the construction of roads and sewerage
systems" B.A. Mozhaev*

*"They created lists of viable and doomed villages. Those
who, in essence, were deprived of the right to live in
their native
village, on the streets of their ancestors, on the banks of
their river, they forgot or did not consider it
necessary to ask whether they liked or disliked this list, where

their place of birth is crossed out, _____
Do you like the place you are being resettled to? F.A.
Abramov*

*"It's eerie when a nameless someone, somewhere,
plans my life, decides, without asking me, whether my village
will exist or not, whether my river will flow, whether my pine
forest will rustle. It stood on the earth for half a thousand years
—and suddenly, bam! Down with it, under the bulldozer."
V.I. Belov*

EU experience abroad

Traditionally, state policy on managing shrinking rural and peripheral areas (non-urbanized spaces) combines attempts to revive (reanimate) by promoting the development of the economy of those territories where there are **some competitive advantages** and prospects, with a policy of creating “*decent conditions for the gradual dying of territories*.” However, Some countries also use so-called “proactive mechanisms” – in particular, **facilitating resettlement** (and in some countries – resettlement) of residents to other, *more “promising” territories*.

— **target programs for regional development** (with the definition of priority areas and regional problems requiring the concentration of joint efforts of the state and regional authorities, including organizational issues and financing);

— **budget and tax system** (targeted transfers from the central level; redistribution of budget funds between regions; establishment of tax breaks for individual regions and types of business activities, and sometimes complete exemption from them for a certain period, etc.);

— **other economic regulators** (preferential lending and subsidies for firms establishing their enterprises in problem regions; provision of non-repayable loans for capital construction or expansion of existing enterprises; financial coverage of expenses related to the training of qualified personnel; tariff regulation (reduction of tariffs for transport, electricity, etc.); establishment of various types of surcharges to retain people in “difficult” territories).

Germany's experience abroad

In Germany, **the theory of central places**, developed by Walter Christaller in 1933, is actively used. It is applied in the development of spatial development projects. For this purpose, a commission for the creation of *equivalent living conditions* was established in 2011. For each territory, starting from the entire country and descending to the level of populated areas, **centers of three levels are identified: A | High Order B | Middle Order C | Low Order**. The centers are identified through **an analysis of infrastructure provision**: the availability and quality of schools, hospitals, libraries, etc., as well as potential centers and their lack thereof. It is assumed that a certain set of social services should be available to residents of *each territory*. The levels of services provided differ for each level of center.

Criteria for determining key settlements

Order of the
Government of the Russian
Federation of December 23,
2022 No. 4132-
r On approval of
methodological
recommendations on the
criteria for determining key settlements
and adjacent territories

- **"support settlement"** - a settlement, located outside the boundaries of urban agglomerations, on the basis of which accelerated development is carried out infrastructure that ensures implementation guarantees in the field of education, accessibility medical care, cultural services and implementation of other needs of the population of the territory one or more municipalities;
- **"adjacent territory"** - the territory of populated areas points whose population has the opportunity receiving medical care, education, services in the sphere of culture and the realization of other needs based on the infrastructure of the supporting settlement, and inter-settlement territory.

Criteria for determining key settlements

• Does not fall within the boundaries of other levels settlement systems

• No closer than 50 km (60 min) to larger centers

• Has areas for development

• Population over 3 thousand.
person

• The population has been declining by no more than 1%
per year over the past 5 years
years

• Total population
adjacent settlements are no more than the
population of the reference area

• Year-round transport

accessibility to the administrative center of the
constituent entity of the Russian Federation and no more
than 2 km to the federal/regional road

More than 50% of the population is provided with the following:

- Gasification (where available)
- Water supply and sewerage
- Broadband Internet
- Medical organizations
- Kindergartens
- Schools (grades 1-11)
- Professional educational organizations
- Cultural institutions
- Institutions for the provision of state and municipal services
- Organizations providing financial services
- Organizations in the field of retail trade and consumer services

Criteria for determining the adjacent territory

- one support settlement has been identified in relation to the territory;
- the territory is not included within the boundaries of the urban agglomeration established by legal acts of the constituent entity of the Russian Federation;
- the distance to the reference settlement along public roads is no more than 50 km;
- distance to the settlement with a population of more than 50 thousand people (including the population of settlements located within a transport accessibility radius of no more than 5 km from a given settlement) on public roads exceeds 50 km.

If the distance between the reference settlements along public roads is less than 50 km, the constituent entity of the Russian Federation is recommended to designate one reference settlement.

For areas with high or low population density, determined in accordance with the legislation of the Russian Federation, as well as in the absence of year-round communication between adjacent areas and the supporting settlement, deviations from the criteria specified in these methodological recommendations are permitted.

Key settlements of Russia

An example of a list of key settlements of a constituent entity of the Russian Federation

Key areas of infrastructure modernization

Currently, one of the challenges in developing small territories is harmonizing the development of rural and urban areas. One approach to addressing this challenge is the development of **modern social infrastructure**. However, a sector-specific approach currently prevails in the creation and operation of facilities. Meanwhile, some cultural and sports facilities are in **poor condition**, or, conversely, recently renovated facilities **are not being used due to lack of demand**, a lack of staff, or other reasons.

The unique nature of sparsely populated areas requires the creation of integrated social **facilities** of various types. This type of facility **combines** the functions of general education institutions, cultural facilities, physical education and sports facilities, supplementary education for children and adults, an internet classroom, and more within a single building. This practice is widely used in other countries.

International experience in designing multifunctional public centers

Volumetric-spatial solution:

- **Centers “under one roof”**, in which all complex interconnected functions are collected into one complex volume.
- **Spatial centers** consisting of two or more separate buildings that are functionally connected open public spaces (squares, gardens, etc.).

Functional richness (basic function):

education

sport

House of Culture

leisure
center

public space

Location features:

In the center of the settlement

On the outskirts of the settlement

Inter-village community
centers

International experience in designing multifunctional public centers

BASIC FUNCTION OF FOREIGN COMMUNITY CENTERS IN RURAL AREAS:

New spatial development strategy

УТВЕРЖДЕНА
распоряжением Правительства
Российской Федерации
от 28 декабря 2024 г. № 4146-р

СТРАТЕГИЯ
пространственного развития Российской Федерации
на период до 2030 года с прогнозом до 2036 года

I. Общие положения

Стратегия пространственного развития Российской Федерации на период до 2030 года с прогнозом до 2036 года (далее - Стратегия) разработана в соответствии с Федеральным законом "О стратегическом планировании в Российской Федерации", национальными целями развития Российской Федерации, определенными Указом Президента Российской Федерации от 7 мая 2024 г. № 309 "О национальных целях развития Российской Федерации на период до 2030 года и на перспективу до 2036 года" (далее - национальные цели), и Основами государственной политики в сфере стратегического планирования в Российской Федерации, утвержденными Указом Президента Российской Федерации от 8 ноября 2021 г. № 633 "Об утверждении Основ государственной политики в сфере стратегического планирования в Российской Федерации".

Стратегия представляет собой документ стратегического планирования, разрабатываемый в рамках целеполагания по территориальному принципу.

Роль Стратегии в достижении национальных целей

Роль Стратегии в системе документов стратегического планирования определяется необходимостью достижения национальных целей в условиях сложившихся тенденций, новых вызовов и возможностей пространственного развития Российской Федерации, а также бюджетных ограничений и роста издержек в экономике.

The goal of spatial development of the Russian Federation is to form **a system of settlement and territorial organization of the economy** of the Russian Federation that will **contribute to the achievement of national goals** and **ensure national security**.

Source: Decree of the Government of the Russian Federation of December 28, 2024 No. 4146-r "On approval of the Strategy for Spatial Development of the Russian Federation for the period up to 2030 with a forecast up to 2036." – URL: <http://government.ru/docs/53917/>

New spatial development strategy

National development goals of the Russian Federation for the period up to 2030 and for the future up to 2036:

- **preserving the population**, strengthening health and improving well-being of people, supporting families;
- sustainable and dynamic **economy**;
- comfortable and safe **living environment**.

Strategy for Spatial Development of the Russian Federation for the Period up to 2030 with a Forecast up to 2036

No.	Type of settlement	Units
1.	Urban agglomeration (core or significant in the periphery)	189
2.	Administrative center of a constituent entity of the Russian Federation (not included in agglomerations)	23
3.	Economic centers (investment projects, science cities)	188
4.	Geostrategic (ZATO, largest border, critically important, and other military)	212
5.	Support settlements of rural areas	1548
Total		2160

New spatial development strategy

2160 key settlements

1.5%

from everyone
populated
points

77.6%

from the total
numbers
population
Russia

Disadvantages of the agglomeration approach:

Degradation of most populated areas

Shortage of personnel in the real sector of the economy

Deterioration of quality of life in cities

Social **polarization**

Overload of capital infrastructure

Environmental load

Depopulation
